

A Vehicle and sensors

- Event camera (DVS, 256 pixels, 90°)
- 3-beam ToF rangefinder (0.1–2.83 m)
- IMU (accelerometer + pitch gyro)

B Two-scale revisit course

- loop A, flown repeatedly: short-gap revisits, served by Layer 1 (still in the window)
- loop B, between laps of A: long-gap returns to A, served by Layer 2 (evicted)

Paths in C

- shared or symbolic path
- learning while the place is in the window
- - - evicted places: verification, recall, consolidation
- 🔒 read-only after eviction

C Two-layer estimator: bounded window and fixed-size synaptic memory
